

Example Candidate

555-010-1234 | candidate@example.com

github.com/example-candidate | [linkedin.com/in/example-candidate](https://www.linkedin.com/in/example-candidate) | <https://example.com>

Software engineer focused on automation, applied AI, and developer tooling, with example experience in Python, C/C++, computer vision prototypes, Raspberry Pi workflows, and testable backend services.

EDUCATION

Example University

BS in Computer Science, GPA: 3.80

2026

TECHNICAL SKILLS

Languages: Python, C, C++, JavaScript, SQL, Bash

AI/ML and Computer Vision: PyTorch, scikit-learn, NumPy, OpenCV, Transfer Learning, Model Evaluation

Web and LLM Applications: React, Flask, REST APIs, JSON Schemas, Prompt Templates

Systems and Tools: Linux, Docker, Git, CMake, OpenMP, pytest

PROJECTS

Computer Vision Defect Detection Demo

Python, OpenCV, PyTorch

- Built a prototype image-classification workflow for detecting visual defects in sample images.
- Prepared a labeled sample dataset with repeatable preprocessing and augmentation scripts.
- Trained a baseline model and summarized evaluation results for future iteration.
- Documented setup steps, known limitations, and recommended next experiments.

Raspberry Pi Sensor Dashboard

Python, Flask, Raspberry Pi

- Built a small-device workflow for collecting sensor readings, logging events, and displaying status.
- Implemented structured logging and threshold-based alerts for important status changes.
- Created a lightweight dashboard to show recent readings and device health.
- Added configuration files and setup notes to support repeatable deployment.

EMPLOYMENT

Software Engineering Intern, Example Robotics, Remote

Jun 2024 - Sep 2024

- Built a Python toolkit that wrapped a C-style device API for common integration workflows.
- Automated documentation generation from structured metadata so examples stayed aligned with API changes.
- Added unit tests and sample notebooks covering setup, command execution, and error handling.

Software Projects Assistant, Acme Automation Lab, City, ST

Jan 2023 - May 2024

- Built internal tools for data cleanup, report generation, and task tracking using Python scripts.
- Helped prototype image-processing workflows using OpenCV, PyTorch, and repeatable evaluation notes.
- Translated informal project requests into scoped tasks, assumptions, and acceptance criteria.
